

## **OSHA Training Center partners with CALINC Training to expand programs**

The OSHA Training Center has developed a new partnership with CALINC Training of Vacaville to expand our curriculum and make some of our key course offerings available to students in the North Bay Area. The combined expertise of our organizations supplements our current programs and brings vital OSHA and environmental training courses geographically closer to our respective students.

Through this strategic alliance the OSHA Training Center has added several CALINC environmental training courses in Dublin, and has authorized CALINC Training to provide OSHA standards based courses at their Vacaville training facility.

We are now offering the following environmental training programs:

- 40-hour HAZWOPER Initial
- 8-hour HAZWOPER Refresher
- Asbestos Contractor Supervisor Refresher
- Lead Related Construction Refresher
- 8-hour EPA Lead Renovation, Repair, and Painting certification course, which fulfills the new EPA RRP requirement regarding pre-1978 housing

CALINC Training is adding the following courses to its curriculum:

- OSHA Standards for Construction
- Cal/OSHA Standards for the Construction Industry
- Trainer Course in OSHA Standards for the Construction Industry
- Update for Construction Industry Outreach Trainers
- Excavation, Trenching, and Soil Mechanics

We anticipate future cross-training opportunities with CALINC Training that will benefit students throughout the Bay Area.
